August 25, 2021

Dear Homeowner,

In July of 2021, the occupant(s) at this address participated in the City's Lead and Copper Sampling Event. The purpose of the sample event is to determine if high levels of lead or copper are leaching into your drinking water from corrosion of your home plumbing system. Thirty-four houses, meeting specific requirements, participated in this special monitoring.

The City is currently required by the State Water Resources Control Board (SWRCB) Lead and Copper Rule to sample every three (3) years. I am pleased to tell you Napa's sampling event results were **BELOW** the action levels and our next sample event will take place in July 2024. The action levels are amounts determined by SWRCB that indicate the water system managers need to investigate additional corrosion control of the water. The rule states that 90% of the water tested must be below the action levels. The action levels and the results of the City's 2021 samples are as follows:

CONTAMINANT	ACTION LEVEL	YOUR SAMPLE TAP	CITY OF NAPA'S 90 th PERCENTILE
Lead	15 ppb	ND ("Non Detect")	ND

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Unlike other regions of the U.S. where lead was prevalent, it was not the predominant construction material used in the City of Napa for water service installations. As indicated, years of monitoring show the existing public system pipe networks does not contribute lead to the drinking water. Please note, information was not provided to us on the day of collection about the location of the sample collected.

The City of Napa is responsible for providing high-quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several, hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you do so, you may wish to collect the flushed water and reuse it for another beneficial purpose, such as watering plants. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline (800) 426-4791 or at www.epa.gov/lead.

Thank you again for your participation in this very important program of our community. Your cooperation is essential in maintaining high water quality standards for the City of Napa. If you have any questions concerning this information, please do not hesitate to contact me at 707-253-0822.

Sincerely,

A handwritten signature in blue ink that reads "Erin Kebbas". The signature is written in a cursive style with a loop at the end of the last name.

Erin Kebbas
Water Quality Manager
